Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and diagnostic agents for determining P. acnes presence. for example, by caryme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New Propionibacterium acnes polypeptides and polynucleotides encoding the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ω
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Maisonneuve JL;
Jones R, Carter
                             Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful treating acne vulgaris.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Propionibacterium acnes predicted ORF-encoded polypeptide #15859
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;

The invention relates to an isolated polymucleotide (ACF64435-ACF64733)
encoding a Propionibacterium acnes protein. The invention also relates to
encoding a Propionibacterium acnes protein. The invention also relates to
compared to the polymucleotides (ABM35624-ABM64536) and to
immunogenic fragments of P. acnes polypeptides. The invention a
ddittonally encompasses expression vectors and host cells comprising a
comparisor of the invention; antibodies against polypeptides of the
invention; fusion proteins comprising a polypeptide of the invention; a
comparisor of the invention; antibodies against polypeptides of the
invention; fusion proteins comprising P. acnes polypeptides,
which this method; a vaccine composition comprising P. acnes polypeptides,
comparisor of determining the presence or absence of P. acnes in a
comparient. The P. acnes polypeptides, polymucleotides, antibodies, fusion
comparient. The P. acnes polypeptides, polymucleotides, antibodies, fusion
proteins, T cell populations or antigen-presenting cells that express the
composition and a method for inhibiting the development of P. acnes in a
comparient. The P. acnes polypeptides, polymucleotides, antibodies, fusion
proteins, T cell populations or antigen-presenting cells that express the
collypeptides are useful for adagnosing preventing or treating acne,
composition of an immune response specific for a P. acnes
conclete acid hybridisation. The vaccine composition is useful for the
conclete acid hybridisation. The vaccine composition as useful for the
contained of an immune response against P. acnes, or for treating acne,
cond the kit is useful for performing a diagnostic assay. The present
contained frame) contained within the P. acnes polymucleotides or acnes polymperion
contained within the P. acnes polymered for the
convenion. Note: The sequence data for this patent did not form part of
the printed specification, but was obtained in electronic format directly
convenion.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Carter D;

                                                                                                                                                                                                                                                                                                                                                                         ð
                                                                                                             The invention relates to an isolated polymucleotide (ACF64435-ACF64733)

encoding a Propionibacterium acnes protein. The invention also relates to encoding a Propionibacterium acnes protein. The invention also relates to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a convention; fusion proteins comprising a polypeptide of the invention; antibodies against polypeptides of the invention; a vaccine composition (comprising P. acnes polypeptides, antibodies, a vaccine composition (comprising P. acnes polypeptides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the patient; and a method for inhibiting the development of P. acnes in a contigen-presenting cells that express the patient; and a method for inhibiting the development of P. acnes in a contigen. The P. acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the patient; or for stimulating an immune response specific for a P. acnes polypeptides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the sequence represents a polypeptide predicted to be encoded by an ORF (open creating frame) contained within the P. acnes yolymented in electronic format directly the printed specification, but was obtained in electronic format directly from WNPO at ftp. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                    ium acnes polypeptides and polynucleotides encoding the
l for diagnosing, preventing or treating acne vulgaris,
an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            measuring placental gene expression

                                                                                                                                                               for analyzing
                                                                                                                                                                                                                                                                                              The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; bone marrow expressed exon; gene expression analysis; probe; microarray; cancer; leukaemia; lymphoma; myeloma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human bone marrow expressed probe encoded protein SEQ ID NO: 37988.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of

The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements/ fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ద
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel human secreted polypeptides. The polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically engineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in bone, cartilage, tendon and/or nerve tissue growth or regeneration; immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AMU29510-AMU33304 represent the amino acid sequences of novel human contactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                               Nucleic acids encoding a range of human polypeptides, useful in genetic vaccination, testing and therapy.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by the treatment, prevention and diagnosis of medical conditions caused by a canes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.

P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The ploypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and diagnostic agents for determining P. acnes presence for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis;
uveitis; endophthalmitis; bone; joint; central nervous system; ELISA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful treating acne vulgaris.

Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies and convergulate expression and activity of P. acnes polypeptides and convergence for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA). Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention relates to an isolated polynucleotide (ACF64435-ACF64733)

cncoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64556) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a polymetrion fusion proteins comprising a polypeptide of the invention; an immune response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P. acnes polypeptides, or the invention; and a method is a vaccine composition (comprising P. acnes polypeptides). The P. acnes polypeptides, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide; a method and kit for detecting or determining the presence or absence of P. acnes in a patient. The P. acnes polypeptides, polymucleotides, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes polypeptides are useful for diagnosing, preventing or treating acne and the kit is useful for performing a diagnostic assay. The present sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polymetion, but was obtained in encoded by an ORF (open reading frame) contained within the P. acnes polymetic format directly the printed specification, but was obtained and electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                  New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                        Maisonneuve JL;

The invention relates to an isolated polymucleotide (ACF64435-ACF6473) encoding a Propionibacterium acnes protein. The invention also relates to prolymetrides (ABM35624-ABM64536) and to immunogenic fragments of P. acnes polypeptides. The invention additionally encompasses expression vectors and host cells comprising a additionally encompasses expression vectors and host cells comprising a comprising a polypeptide of the invention; antibodies against polypeptides of the invention; unamnue response specific for a P. acnes polypeptide and an isolated T cell population comprising T cells prepared via this method; a vaccine composition (comprising P acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations, or antigen-presenting cells that express the polypeptide); a method and kit for detecting or determining the presence or absence of P. acnes in a patient; and a method for inhibiting the development of P. acnes in a patient. The P. acnes polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acne protein. The polymucleotides can also be used as probes or primers for nucleic acid hybridisation. The vaccine composition is useful for the expression of an immune response against P. acnes, or for treating acne, and the kit is useful for performing a diagnostic assay. The present cut sequence represents a polypeptide predicted to be encoded by an ORF (open reading frame) contained within the P. acnes polymetric act his patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pt_generales
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Propionibacterium acnes polypeptides and polynucleotides encoding the polypeptide, useful for diagnosing, preventing or treating acne vulgaris, or for stimulating an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            . for diagnosing, preventing or treating acne vulgaris, an immune response specific for a P. acnes protein.
                                                                                                                                                                                                                                                                                                                                                                                                 Maisonneuve JL;

AAX51459 to AAX51691 represent 5' expressed sequence tags (ESTs) for human secreted proteins, and encode the proteins given in AAY12681 to AAY12913, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopolesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/ chemokinetic activity, haemostatic and thrombolytic activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                           New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX, where X is 1-11491 (see Table 1 in the specification). ABN15762 to ABN27252 encode the human ORFX in the specification). ABN15762 to ABN27252 encode the human ORFX proteins given in ABP001010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated with an ORFX-associated with an ORFX-associated with orFX-associated disorder. ORFX polymucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperprolificative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, infectious cateoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disorders related to organ transplantation, autoimmune disorders such as multiple sclerosis, infectious diseases, autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune thyroiditis, myasthenia gravis, graft-versus-host disease and autoimmune thyroiditis, myasthenia gravis, sortensus sortection or regenerative disorders, or periodontal disease, and for gut procection or regenerative disorders, or periodontal disease, and for gut perfusion injury in various tissues and conditions resulting from systemic cytokine damage. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part of the printed specification, int/pub/published_pct_energe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

The invention relates to isolated polynucleotide (I) and polypeptide (II)

sequences. (I) is useful as hybridisation probes, polymerase chain

reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
and in recombinant production of (II). The polynucleotides are also used
in diagnostics as expressed sequence tags for identifying expressed
cactivity of (II) or to treat disease states involving (II). (II) is useful in gene therapy techniques to restore normal

cactivity of (II) or to treat disease states involving (II). (II) as molecular weight markers and as a food
supplement. (II) and its binding partners are useful in medical imaging
of sites expressing (II). (I) and (II) are useful for treating disorders
involving aberrant protein expression or biological activity. The
polypeptide and polynucleotide sequences have applications in
diagnostics, forensics, gene mapping, identification of mutations
capped to produce other types of data and products dependent on DNA and
amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
amino acid sequences of the invention. Note: The sequence data for this
patent did not appear in the printed specification, but was obtained in
electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

CC (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense correction cell containing the vector; (3) an isolated correction cells acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (5) producing the polypeptide; (6) inhibiting cellular correction or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound sactivity; (11) a culture comprising strains in which the gene compound the strains in a culture or collection of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound the strains is present in a culture compound that inhibits the correction of an organism; or (13) identifying the target of a compound that inhibits the correction or an organism. Or he antipanse ancleic acids are useful for correction proliferation or for screening for homologous nucleic acids required for greening or for screening drug drug discovery programs or for screening drug drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                screening

                                                                                                                                                                                                                                                                                                                                                                                                                        ઠ
                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                  The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                     New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
preparing a vaccine composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                  Gaps

The invention relates to an isolated tropomyosin (Tpm)-related antianglogenic receptor polypeptide or peptide, which is a is a fragment of a full-length native Tpm protein expressed on the surface of endothelial cells, or a variant of the fragment. It has a molecular mass of about 17 kDa and corresponds in its sequence to, or is a variant of, an internal fragment of a native Tpm isoform which is a binding site for antianglogenic polypeptide agents; The isolated antianglogenic receptor polypeptide, peptide or variant has substantially the same biochemical activity of binding to the antianglogenic polypeptide agents, as does the isolated polypeptide or peptide is human histidine-proline crich glycoprotein (HRG), rabbit HRG, a Tpm-binding, antianglogenic human kininogen (HK), the D5 domain of fragment of human or rabbit HPRG, two chain human kininogen (HK), the D5 domain of fragment of the kW or its D5 domain. The Tpm-related antianglogenic receptor polypeptide or peptide, antianglogenic homologue, variant, domain of fragment of the kW or its D5 antianglogenic homologue, variant, domain or fragment of the kW or its D5 antianglogenic homologue, variant, domain or fragment of the kW or its D5 antianglogenic receptor polypeptide or peptide in andothelial cell apoptosis, or for treating tumours or cancer, diabetic endothelial cell apoptosis, or for treating tumours or cancer, diabetic retinopathy, neovascular glaucoma, uveitis, endometriosis, arthritis, psoriasis, or scleroderma. The antibody may be also used for detecting the presence of a Tpm polypeptide or peptide in a biological sample, for promoting wound healing, or for treating diseases or conditions in which increased anglogenesis is desired, e.g. coronary artery disease or peripheral artery disease. The present sequence represents a rabbit HPRG, protein His-Pro (H/P) rich domain.
                                                                                                                                                             New tropomyosin-related antiangiogenic receptor polypeptide, useful for inhibiting endothelial cell migration, invasion, proliferation or angiogenesis, inducing endothelial cell apoptosis, or treating tumors or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Recombinant expression vector; transcription regulatory element; Klebsiella pneumoniae protein; antibacterial; Vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                               ઠે
                                                                                                                                                                                                                                                            ô
                                                                                                                            The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents the human glycosylhydrolase 12 protein. Also described are: (1) polynucleotides encoding for the glycosylhydrolase 12 protein; (2) production of the protein using a DNA recombination process; and (3) an agonist resisting the protein and its
                                                                         coding a Klebsiella pneumoniae polypeptide, useful composition against Klebsiella pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New glycosylhydrolase 12 polypeptide and the polynucleotide encoding useful in the treatment of various diseases, such as malignant tumor, hemopathy, HIV Infection, immunological diseases and various inflammations.

treatment effect. Glycosylhydrolase 12 has cytostatic, antiviral, ant HIV, immunomodulatory and antiinflammatory activities. The glycosylhydrolase protein and polynucleotide sequence can be used for treating various diseases, such as malignant tumour, haemopathy, HIV Infection, immunological diseases and various inflammations

GENERAL INFORMATION:

APPLICANT: Shuping Tong et al.

TITLE OF INVENTION: HEPADNAVIRUS RECEPTO!

NUMBER OF SEQUENCES: 75

CORRESPONDENCE ADDRESS:

ADDRESSEE: Fish & Richardson P.C.

STRET: 225 Franklin Street

CITY: Boston

STATE: Massachusetts

CONNTRY: U.S.A.

ZIP: 02110-2804

COMPUTER: IBM PC COMPATIAL

COMPUTER: Patent Nelease #1.0, Version

Sequence 1165, Application US/09640211A

Patent No. 6833446

GENERAL INFORMATION:

APPLICANT: Wood, Marion

APPLICANT: Shenk, Michael A.

APPLICANT: Glenn, Matthew

TITLE OF INVENTION: Compositions and Methods for the

TITLE OF INVENTION: Composition of Gene Transcription

FILE REFERENCE: 11000.1021CUU

CURRENT APPLICATION NUMBER: US/09/640,211A

CURRENT FILING DATE: 2000-08-16

NUMBER OF SEQ ID NOS: 2368

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 1165

Sequence 1848. Application US/09248796A
Patent No. 6747137
GENERAL INFORMATION:
APPLICANT: Keith Weinstock et al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANE
TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.132
CURRENT APPLICATION NUMBER: US/09/248,796A
CURRENT FILING DATE: 1999-02-12
PRIOR APPLICATION NUMBER: US 60/074,725
PRIOR FILING DATE: 1998-02-13
PRIOR FILING DATE: 1998-08-13
NUMBER OF SEQ ID NOS: 28208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 6701, Application US/09949016

Patent No. 6703204;
GENERAL INFORMATION:
APPLICANT: Mutter, George;
APPLICANT: Baak, Jan
TITLE OF INVENTION: Prognostic Classification of Breast Cancer;
FILE REFERENCE: B0801/7224(JRV);
CURRENT APPLICATION NUMBER: US/09/917,254;
CURRENT FILING DATE: 2001-07-27;
PRIOR FILING DATE: 2000-07-28;
NUMBER OF SEQ ID NOS: 102;
SOFTWARE: Patentin version 3.0;
SEQ ID NO 94;
LENGTH: 702
                                                                                                                                                                                                      ö

US-09-949-016-6978

Sequence 6978, Application US/09949016

Patent No. 681239

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

ITILE OF INVENTION: POLYMORPHIGNS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT PILING DATE: 2000-04-14

PRIOR FILING DATE: 2000-10-20

PRIOR PELING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/237, 768

PRIOR APPLICATION NUMBER: 60/231, 498

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 6978

LENGTH, 4377
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

US-08-982-597A-16

Sequence 16, Application US/08982597A

Patent No. 5932693

GENERAL INFORMATION:

APPLICANT: Staatz, William D.

TITLE OF INVENTION: Antithrombotic Peptides

NUMBER OF SEQUENCES: 26

CORRESPONDENCE ADDRESS:

ADRESSE: Scott J. Meyer

STREET: 800 No. 5932693th Lindbergh Blvd.

CITY: St. Louis

STREET: 800 No. 5932693th Lindbergh Blvd.

CITY: St. Louis

STREET: WO.

COUNTRY: USA

COMPUTER: IBM PC Compatible

OPERATION TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Word Perfect 5.0

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/982,597A

FILING DATE: 10-DEC-1996

CLASSIFICATION: 530

PRIOR APPLICATION: 530

PRIOR APPLICATION: 530

PRIOR APPLICATION: 530

PRIOR APPLICATION: 530

ATTORNEY/AGENT INFORMATION:

NAME: Meyer SCOCTE J.

REGISTRATION NUMBER: 25,275

REFERENCE/DOCKET NUMBER: WU-3002

TELECOMMUNICATION INFORMATION:

NAME: Meyer SCOCTE J.

REFERENCE/DOCKET NUMBER: WU-3002

TELECOMMUNICATION INFORMATION:

NAME: Meyer SCOCTE J.

REFERENCE/DOCKET NUMBER: WI-307

TELECOMMUNICATION INFORMATION:

NAME: Meyer SCOCTE J.

REFERENCE/DOCKET NUMBER: WI-307

TELECOMMUNICATION INFORMATION:

NAME: Meyer SCOCTE J.

REGISTRATION FOR SEQ ID NO: 16: SEQUENCE CHARACTERISTICS:

LENGTH: TOPOLOGY: Inner and CIGHS

TOPOLOGY: Inner and CICHS

MOTECTIFE TYDE: DEATING

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C; Species: Rattus norvegicus (Norway rat)
C; Date: 17-Mar-1987 #sequence_revision 17-Mar-1987 #text_change 09-Jul-2004
C; Accession: A03296
R; Ziemer, M.A.; Swain, W.F.; Rutter, W.J.; Clements, S.; Ann, D.K.; Carlson, D.M.
J. Biol. Chem. 259, 10475-10480, 1984
A; Title: Nucleotide sequence analysis of a proline-rich protein cDNA and peptide homologi A; Reference number: A03296; MUID:84289443; PMID:6547951
A; Accession: A03296
A; Molecule type: mRNA
A; Cossion: A03296
C; Comment: This protein contains six 18- to 19-residue repeats.
C; Comment: This protein may protect teeth by binding to tannins.
C; Comment: This protein may protein
C; Comment: This protein may protect teeth by binding to tannins.
C; Superfamily: proline-rich protein
C; Keywords: duplication; parotid gland; saliva; tandem repeat
F; 1-13/Domain: signal sequence #status predicted <MAT>
F; 14-206/Product: acidic proline-rich protein #status predicted <MAT>
F; 80-189/Region: 18-residue repeats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 11
F72641
hypothetical protein APE0566 - Aeropyrum pernix (strain K1)
C;Species: Aeropyrum pernix
